

Human IL-12p70 ELISPOT Matched Antibody Pairs

Catalog No: CK1065 **Size:** 10 plate format

Coating antibodies (2 vials)

Product: Monoclonal antibody to human interleukin 12p70 (IL-12p70) (does not bind the p40 or p35 subunits)
Isotype: Mouse IgG1
Production: *In vitro* using serum free medium
Purification: DEAE ion exchange chromatography
Contents: Each vial contains sufficient material for coating of five 96-well ELISPOT plates
Buffer: Prior to lyophilization: 0.25 ml PBS + 125 mM trehalose
Application: Coating antibody in an ELISPOT system
Reconstitution: Dissolve the contents of one vial by injection of 0.25 ml distilled water into the vial and dilute 100 times in PBS. The total amount of one vial is sufficient for five 96-well ELISPOT plates (480 determinations; 50 µl/well).

Detector antibodies (2 vials)

Product: Biotinylated polyclonal antibody to human interleukin 12p70 (IL-12p70)
Isotype: Rabbit IgG
Purification: Ammonium sulphate precipitation and protein A-affinity chromatography
Labeling: With Biotin-7-NHS (N-hydroxysuccinimide)
Contents: Each vial contains sufficient material for five 96-well ELISPOT plates
Buffer: Prior to lyophilization: 0.5 ml PBS + 1% BSA + 125 mM trehalose
Application: Detection antibody in an ELISPOT system
Reconstitution: Dissolve the contents of one vial by injection of 0.5 ml distilled water into the vial and dilute 100 times in Dilution buffer. The total amount of one vial is sufficient for five 96-well ELISPOT plates (480 determinations; 100 µl/well).

General

Specificity: Validated for detecting human IL-12
Sterility: Membrane filtered (0.2 µm)
Stability: The lyophilized products are stable for more than one year at 4°C. After reconstitution, the antibodies are stable for several months at 4°C (if kept sterile) or for minimal one year at -20°C.

NOT FOR HUMAN USE. FOR RESEARCH ONLY. NOT FOR DIAGNOSTIC OR THERAPEUTIC USE.
